

Game-Based Approaches Globally

Hosted by: Fontys University of Applied Sciences and Network Teaching Games (The Netherlands)

Date: 8th April 2022

We are very pleased to finally be able to organize another symposium from the Network Teaching Games (NTG) on April 8, 2022 at Fontys Sporthogeschool in Eindhoven after a number of years of Corona delay. In previous years we have already welcomed various international speakers in the field of game(er) centered game concepts ('Game-Based Approaches') to Eindhoven.

In honor of the 40th anniversary of the international network Teaching Games for Understanding (TGfU), we will go beyond national borders in the upcoming edition through the symposium 'Game-Based Approaches Globally' and we want to give participants an insight into how professional colleagues to give substance to game-centered game concepts in other countries.

The keynote of the symposium will be provided by the chair elect of the international TGfU network, Jeroen Koekoek. In addition, various practical workshops are provided in which experts from different game sports disciplines will inspire the participants about working with the principles that underlie game-centered game concepts.

Program

| | |
|--------------|---|
| 15:30 | Walk in |
| 16:00 | Opening symposium with an introduction of TGfU and inspiring examples from around the world |
| 17:00 | Workshop round 1 |
| 18:15 | Digital poster presentation and meal |
| 19:15 | Workshop round 2 |
| 20:30 | Network drink |

Workshops

'Target games - Translating game challenges into challenging game forms'

Goal play is a common part of gym class. There are many target games to play both indoors and outdoors. During this workshop I want to take you into the world of the target games family. We will work inside the room with different target games: think of basketball, handball, korfbal and uni hockey. Which game challenges are all central to goal games? Together we will look at how we can translate these game challenges into challenging and appropriate forms of play that are successful for every student.

Robbin Beukhof

Robbin works as a training teacher at Fontys ALO in Eindhoven. He also works as a physical education teacher at the Rembrandt College in Veenendaal.

'Game-centered play education and the Athletic Skills Model (ASM), do they go together?'

From practice-oriented game education to offering game-oriented education is a trend that has been going on for a decade. A little more recent is the popularity of the ASM model. Basic forms, basic movement skills, coordination abilities...

The assumption is that this will make play education more technology oriented. Is that right? Do these two trends go together? And how?

In this workshop we explore the basic principles of both models in a practical way and, in addition to theoretical frameworks, we also give specific examples of what a program can look like with a substantiation from both models.

Ronald Mijzen

Education teacher at the ALO Amsterdam with a focus on subject didactics and play education.

Klaas Boomars

Education teacher at the ALO Amsterdam with a focus on subject didactics and play education.

'Pickleball, a kickback game tailored to your educational context'

Offering racket sports in education seems to be quite a task. A shortage of technical skills often stands in the way of a smooth game flow, so that the fun quickly disappears. Pickleball is an accessible variant of tennis and is played in both singles and doubles. Due to a smaller playing field, the size of a badminton field, and adapted playing material, the entry threshold is significantly lowered. The hole ball and wooden racket provide a slower ball change, giving players more time to make decisions and act. This makes Pickleball an ideal kickback game for game education.

In the session we opt for the SpeelderWijs approach, which can also be found in the most recent edition of the book *'Speel je uit! – Practice book sports games'* (H. Leysen, T. Dehandschiet, H. Minten & P. Vandersmissen).

Different game challenges of the kickback games are highlighted in this session. For each of these game challenges, a progressive structure in game and/or practice forms is provided, always with a clear link to the endgame form. Taste Pickleball and you'll love it right away!

Hans Minten

Teacher of play education, teacher training Physical Education and Movement Recreation. UCLL University of Applied Sciences, Diepenbeek campus in Belgium.

Stefan Delen

Teacher of play education, teacher training Physical Education and Movement Recreation. UCLL University of Applied Sciences, Diepenbeek campus in Belgium.

'Rugby – a multifaceted target game'

Rugby is a target game in which many facets of movement come to the fore; run, turn, fall, punch, lift, push, throw balls and kick. Although rugby teams have complete playbooks with rehearsed tactics, the most decisive factor is *decision making*. During this workshop Joost shows us how he teaches adaptive play from the peat (u6) to the adults at the highest level in the Netherlands. He does this by offering the sport of rugby in game formats in which his knowledge of motor learning and the Athletic Skills Model are used.

Joost Kuppens

Joost Kuppens is a sporting centipede with a great interest in rugby and other acyclic sports. He works as a trainer on behalf of Rugby Netherlands, holds various positions at the Dukes, is owner of Monkey Moves & neighbourhood sports coach for top sport for the municipality of Den Bosch.

'Deliberate Play – Effective training while retaining fun and motivation'

Deliberate Play is a modern, young training method based on the intrinsic motivation and pleasure of players. By 'hiding' your training target in all kinds of games, your players will get to work with great pleasure and high intensity.

You can make all objectives within the Deliberate Play method trainable by influencing the 3 pillars player, task and environment. Also, Deliberate Play suits all sports and can be made suitable for all ages. In the workshop we will discuss the backgrounds of the method and its translation into practice.

After the webinar you will be able to independently design exercises based on the Deliberate Play method and give them to your team.

Bas van Baar

Bas van Baar works in the youth academy of AZ Alkmaar, after having previously been active at De Graafschap (youth) and NEC Nijmegen (youth and 1st team). Bas is UEFA A trained and also in possession of the Pabo diploma.

Registration and costs

Early Bird rate of €60 (incl. workshop participation, dinner and drinks).

If you register after March 8 (5:00 PM), you pay the regular rate of €85.

We have a ticket of € 20, - especially for students . Make a note of your student number when making a reservation. Specify your workshop preference (1st, 2nd and reserve choice) when you register.
